RESEARCH FOCUS AREAS

ABORIGINAL HEALTH RESEARCH FOCUS AREA Head, Glenn Pearson Aboriginal Health is a Research Focus Area that aims to improve the health and wellbeing of Aboriginal children and families. This is an overarching priority for every Research Focus Area at the Institute. As there are specific cultural, social and economic contexts that require more specialised investigation in collaboration and consultation with Aboriginal families, this Research Focus Area is unique in that it provides advice, technical and cultural support across the Institute to all programs of research.
